## **Thrive Containers Advances Agriculture with Intelligent Container Technology**

### *Global Innovation That Brings Fresh Greens to Local Markets*

St Petersburg, FL (Nov 9th, 2020)- Thrive Containers launched operations today with its new intelligent container technology, aiming to disrupt the commercial farming industry. COVID-19 and climate change have accelerated existing strains in global food accessibility and supply chains, highlighting the need to rethink the world's agriculture systems. To enable local purveyors to flourish in this environment, the St Petersburg, FL manufacturer has developed the Ohio Farm Container Model. This proprietary hardware/software package utilizes artificial intelligence to yield industry-leading outputs for leafy greens, while reducing the total environmental impact on our planet.

According to Crunchbase News, agriculture technology investments have grown 250% in the past 5 years alone. Thrive Containers Founder and CEO Shannon O'Malley has been on the forefront of this change through six years of container farm innovation. O'Malley observed "Thrive Containers is redefining shipping container farming technology. Our vision is to not only bring accessibility to farming but to offer great return on investment for the AgTech industry." Thrive Container's farm system uniquely excels in software automation, customer experience ease of use, and adaptability engineered by industry-leading experts. The result is maximized, year-round crop growth, reducing up to 90% of freshwater resources used in traditional agriculture practices.

Thrive Containers parent company Brick Street Farms, proudly partners with Publix & Greenwise Super Markets throughout the Southeast and offers custom farm hubs to investors from around the world. Investors can submit their purchase applications for the Ohio Farm Container Model starting November 9th 2020, which includes a \$50 application fee. For more information about Thrive Containers visit [www.thrivecontainers.com](http://www.thrivecontainers.com).

### ***About Thrive Containers***

***Thrive Containers are engineered, manufactured and sold out of its St. Petersburg, Florida headquarters with a mission to ignite a sustainable farm revolution by dramatically reshaping the global population's ability to access to clean, healthy food. Each model is fully automated with custom hardware, software, and artificial intelligence seed technology. Built for farming in all environments, Thrive Containers provides healthy, fresh greens, year-round.***
